

Javelina Software announces ADsecurity

ADsecurity provides Microsoft® Active Directory® Administrators tools to maintain a secure network

(Edgewater, MD – 012.27.2007) Javelina Software, LLC, today announced the addition of a new product, ADsecurity™, a set of tools specifically designed to help IT administrators manage their network security. With ADsecurity's reports and tools administrators have the ability to locate, document, and repair security rights in an Active Directory network.

ADsecurity contains dozens of pre-configured reports with the ability to report on Security rights for Files and Shares, Active Directory Objects, and Exchange Mailboxes: the exact information needed to comply with government regulations such as HIPAA and Sarbanes-Oxley.

Increasing network security is a top priority for many companies. It is imperative for large companies to maintain a separation of data. Human Resource files contain personal data that should only be accessed by an HR representative and most companies don't want open access to their accounting files. With ADsecurity IT administrators can pull up a report that will document who has access to what folders and files. Prior to ADsecurity many administrators spent hours fumbling with spreadsheets and screenshots to document who has access to a particular folder and now it takes seconds. And to make the reporting process even more convenient, all reports can be scheduled to run automatically and even e-mailed automatically, via SMTP or Exchange, making it easy for administrators to relay the information to auditors.

ADsecurity also includes several tools to analyze and clean network ACLs. These tools can scan through the ACLs on Files, Shares and Active Directory Objects and find empty or missing ACLs, invalid or deleted SIDs in ACEs, and several other common security problems. And, many of these problems can be automatically corrected with the very same tools.

Javelina software continues to prove through ADsecurity that they are serious about helping IT administrators manage their everyday tasks such as network security. "We pride ourselves in providing the tools necessary for Active Directory administrators to effectively manage their network." states David Ritchie, President of Javelina Software.

Pricing and Availability

Available immediately, ADsecurity is priced at \$395 per administrator. ADsecurity is the newest edition to ADtoolkit Elements which include ADuser™, ADgroups™, ADcontacts™ and ADreporter™. Each are sold separately or bundled, according to a per administrator pricing model. Pricing includes one year of technical support and free upgrades for one year at no additional charge. ADtoolkit v4.0, the engine behind the Elements, includes all the ADtoolkit Elements and more, and is available at \$1295 per admin copy. Administrators who own any ADtoolkit Elements and decide to upgrade to ADtoolkit, will be offered a special upgrade price.

About Javelina Software

Since 1998, Javelina Software has been dedicated to providing network administrators the products they need to make their jobs easier. ADtoolkit, Javelina Software's current

flagship product, is an award winning set of tools that ensures expedient management of tasks essential to the administration of Active Directory (AD). ADxray®, the newest addition to Javelina Software's line of management solutions, provides administrators with an in-depth, low-level view of AD. Javelina Software's Migration Toolbox, the leading solution used by Banyan Vines customers who are migrating to Active Directory, seamlessly migrates users, groups, and mailboxes. And, Javelina Software's founding product, HappyMail®, is an e-mail client for Banyan Vines networks. Javelina Software now provides companies a smooth transition to and efficient administration of their Windows networks.
